NOTE.—The figures in this report are provisional. The number of births shown for each of the years 1943 to 1948 is exclusive of the number of late registrations—births registered on the authority of the Registrar General. Deaths have been assigned so far as possible to the area of residence, and those of non-residents of Eire have been excluded.

MARCH QUARTER, 1948.

MARRIAGES.

The marriages registered during the quarter numbered 3,673, equivalent to an annual rate of 4.9 per 1,000 of the estimated population; this rate is 0.3 below that for the corresponding quarter of 1947.

Of the total marriages, 3,457 (or 4.9 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (216) is equivalent to 4.3 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 16,177, of which 8,353 were of males and 7,824 of females.

The number represents a rate of 21.4 per 1,000 of the estimated population, which is 1.9 below that for the first quarter of 1947.

The total includes 467 illegitimate births, equivalent to 2.9 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 10,653; of this number 5,560 were of males, and 5,093 of females.

The equivalent annual rate was 14.1 per 1,000 of the estimated population, being 7.3 below the rate for the first quarter of the preceding year. The rate for 1948 is the lowest yet recorded.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles, typhus and diarrhoea and enteritis (under 2 years)—represented an annual rate of 0.3 per 1,000, which is 0.2 below that for the first quarter of 1947.

When compared with the corresponding quarter of 1947, the deaths from these diseases show decreases in the case of typhoid fever of one, scarlet fever of one, whooping cough of 54, diphtheria of 6 and diarrhoea and enteritis (under 2 years) of 128. On the other hand deaths from dysentery have increased by 3 and measles by 10.

The deaths from diarrhoea and enteritis (under 2 years) numbered 104, including 28 for the City of Dublin.

Influenza.—The number of deaths from influenza was 74, which is 343 less than that for the first quarter of 1947.

Tuberculosis.—Deaths from this disease numbered 856, including 692 from pulmonary tuberculosis and 164 from other forms of tuberculosis. The figures for the first quarter of 1947 were 981, 769 and 21.2 respectively. The rate for all forms of this disease for the first quarter of 1948 was 1.1 per 1,000, that for pulmonary tuberculosis being 0.9 and all other forms 0.2, the respective rates for the first quarter of the preceding year were 1.3, 1.0 and 0.3.

Cancer.—Deaths from cancer numbered 1,011, being equivalent to a rate of 1.3 per 1,000 of the population; in the corresponding quarter of 1947 the number was 1,014 and the rate 1.4.

Puerperal Causes.—Deaths from these causes were represented by a rate of 1.4 per 1,000 births registered, comprising 0.2 for puerperal infection, and 1.2 for other puerperal causes, as compared with 1.4, 0.1 and 1.3 for the first quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 63 and that for the March quarter of 1947 was 92. The rate for 1948 is the lowest yet recorded.

Population.—It is estimated that at the middle of the year 1948 the population was 3,022,000 (1,528,000 males and 1,494,000 females). This estimate, based on the population according to the Census of Population, 1946, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is provisional.

Table II. - DEATHS registered from some of the PRINCIPAL CAUSES during each of the years 1943 to 1948 by quarterly periods, with the rates represented thereby.

*Typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles typhus, and diarrhoea and enteritis (under 2 years of age).

† The rates for Éire and the City of Dublin are calculated on the estimated population at the middle of 1948 and those for the other areas on the population according to the Census of Population, 1946.

‡ The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table V., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

Table IV.—MARRIAGES, BIRTHS and DEATHS Registered by Provinces and Counties, with the Deaths from some of the principal causes ; inquest cases ; deaths in public institutions and uncertified deaths during the March Quarter, 1948.

(a) According to the Census of 1946. The populations for the City of Dublin and the Borough of Dun Laoghaire are estimated to the middle of 1948.
(b) The number of births in this Table is partially corrected according to the residence of the mother. The number of births in Table IV is the total registered in the respective areas.
(c) Typhoid fever. (d) Including one death from typhoid fever and 3 from dysentery.

Table VI.—Deaths registered for the City of Dublin and the County Borough of Cork by Registrars' Districts, during the March Quarter, 1948.

[illegible]

Table VII.—Summary of Cases of Infectious Diseases notified to the Department of Health during the March Quarter, 1948.

This Summary has been prepared from the Department's Weekly Returns, but adjustments have been made in respect of any corrections of these returns received after their issue.

The letters in the last column denote the following diseases : A. Acute Anterior Poliomyelitis. B. Cerebro-spinal Fever. C. Encephalitis Lethargica. D. Diarrhoea and Enteritis. E. Paratyphoid A. F. Paratyphoid B. G. Trachoma. H. Erysipelas. J. Ophthalmia Neonatorum. K. Pemphigus Neonatorum. L. Undulant Fever. M. Continued Fever. N. Dysentery (Bacillary). O. Dysentery (Amoebic). P. Malaria. Q. Membranous Croup. U. Scabies.

| „ VIII. Cases treated in Dublin hospitals | 32 |

NOTE.—The figures in this report are provisional. The number of births is exclusive of the number of late registrations—births registered on the authority of the Registrar General. Deaths have been assigned so far as possible to the area of residence, and those of non-residents of Eire have been excluded.

JUNE QUARTER, 1948.

MARRIAGES.

The marriages registered during the quarter numbered 4,058, equivalent to an annual rate of 5.4 per 1,000 of the estimated population; this rate is 0.2 above that for the corresponding quarter of 1947.

Of the total marriages, 3,844 (or 5.4 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (214) is equivalent to 4.3 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 18,006, of which 9,203 were of males and 8,803 of females.

The number represents a rate of 23.8 per 1,000 of the estimated population, which is 1.4 below that for the second quarter of 1947.

The total includes 633 illegitimate births, equivalent to 3.5 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 9,419; of this number 4,953 were of males, and 4,466 of females.

The equivalent annual rate was 12.5 per 1,000 of the estimated population, being 2.5 below the rate for the first quarter of the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles, typhus and diarrhoea and enteritis (under 2 years)—represented an annual rate of 0.2 per 1,000, which is 0.2 below that for the second quarter of 1947.

When compared with the corresponding quarter of 1947, the deaths from these diseases show decreases in the case of typhoid fever of 3, whooping cough of 29, diphtheria of 9, measles of 6 and diarrhoea and enteritis (under 2 years) of 81. On the other hand deaths from scarlet fever have increased by 2.

The deaths from diarrhoea and enteritis (under 2 years) numbered 85, including 20 for the City of Dublin.

Influenza.—The number of deaths from influenza was 53, which is 86 less than that for the second quarter of 1947.

Tuberculosis.—Deaths from this disease numbered 852, including 702 from pulmonary tuberculosis and 150 from other forms of tuberculosis. The figures for the second quarter of 1947 were 1,062, 812 and 250 respectively. The rate for all forms of this disease for the second quarter of 1948 was 1.1 per 1,000, that for pulmonary tuberculosis being 0.9 and all other forms 0.2, the corresponding rates for the second quarter of the preceding year were 1.4, 1.1 and 0.3.

Cancer.—Deaths from cancer numbered 932, being equivalent to a rate of 1.2 per 1,000 of the population; in the corresponding quarter of 1947 the number was 904 and the rate 1.2.

Puerperal Causes.—Deaths from these causes were represented by a rate of 1.4 per 1,000 births registered, as compared with 1.3 for the second quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 46 and that for the June quarter of 1947 was 65. This rate is the lowest yet recorded.

Population.—It is estimated that at the middle of the year 1948 the population was 3,023,000 (1,529,000 males and 1,494,000 females). This estimate, based on the population according to the Census of Population, 1946, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is provisional.

Table I.—MARRIAGES, BIRTHS and DEATHS registered in the years 1943 to 1948, by Quarters.

[illegible]

Quarterly Return of Marriages, Births and Deaths.

Table II.—DEATHS registered from some of the PRINCIPAL CAUSES during each of the years 1943 to 1948 by quarterly periods, with the rates represented thereby.

*Typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles typhus, and diarrhoea and enteritis (under 2 years of age).

† The rates for Éire and the City of Dublin are calculated on the estimated population at the middle of 1948 and those for the other areas on the population according to the Census of Population, 1946.

‡ The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table V., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

Table IV.—MARRIAGES, BIRTHS and DEATHS Registered by Provinces and Counties, with the Deaths from some of the principal causes ; inquest cases ; deaths in public institutions and uncertified deaths during the June Quarter, 1948.

| PROVINCES AND COUNTIES | Area in Statute Acres | Popula- tion according to the Census of Popula- tion, 1946. | Marri- ages | Births* | Deaths | The deaths registered during the Quarter include | | | | | | | | | | | | | | | Inquest cases | In public institutions | Uncertified deaths | |

NOTE.—The figures in this report are provisional. The number of births is exclusive of the number of late registrations—births registered on the authority of the Registrar General. Deaths have been assigned so far as possible to the area of residence, and those of non-residents of Eire have been excluded.

SEPTEMBER QUARTER, 1948.

MARRIAGES.

The marriages registered during the quarter numbered 4,963, equivalent to an annual rate of 6.6 per 1,000 of the estimated population; this rate is 0.1 below that for the corresponding quarter of 1947.

Of the total marriages, 4,606 (or 6.6 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (357) is equivalent to 7.2 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 16,410, of which 8,508 were of males and 7,902 of females.

The number represents a rate of 21.9 per 1,000 of the estimated population, which is 1.5 below that for the third quarter of 1947.

The total includes 495 illegitimate births, equivalent to 3.0 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 7,886; of this number 4,250 were of males, and 3,636 of females.

The equivalent annual rate was 10.5 per 1,000 of the estimated population, being 0.7 below the rate for the third quarter of the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles, typhus and diarrhoea and enteritis (under 2 years)—represented an annual rate of 0.2 per 1,000, which is 0.1 below that for the third quarter of 1947.

When compared with the corresponding quarter of 1947, the deaths from these diseases show decreases in the case of typhoid fever of one, whooping cough of 3, diphtheria of 6, measles of 35 and diarrhoea and enteritis (under 2 years) of 87.

The deaths from diarrhoea and enteritis (under 2 years) numbered 69, including 18 for the City of Dublin.

Influenza.—The number of deaths from influenza was 24, which is one less than that for the third quarter of 1947.

Tuberculosis.—Deaths from this disease numbered 679, including 512 from pulmonary tuberculosis and 167 from other forms of tuberculosis. The figures for the third quarter of 1947 were 855, 636 and 219 respectively. The rate for all forms of this disease for the third quarter of 1948 was 0.9 per 1,000, that for pulmonary tuberculosis being 0.7 and all other forms 0.2, the corresponding rates for the third quarter of the preceding year being 1.2, 0.9 and 0.3.

Cancer.—Deaths from cancer numbered 982, being equivalent to a rate of 1.3 per 1,000 of the population; in the corresponding quarter of 1947 the number was 929 and the rate also 1.3.

Puerperal Causes.—Deaths from these causes were represented by a rate of 1.5 per 1,000 births registered, as compared with 1.8 for the third quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 38 compared with a rate of 47 for the September quarter of 1947. The rate is the lowest yet recorded.

Population.—It is estimated that at the middle of the year 1948 the population was 2,997,400 (1,516,200 males and 1,481,200 females). This estimate, based on the population according to the Census of Population, 1946, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is provisional.

Table III.—DEATH RATES from all causes, and from some of the principal causes per 1,000 of the population, the mortality per 1,000 births represented by deaths of infants and particulars of the deaths from puerperal causes during the September Quarter, 1948.

| PROVINCES COUNTIES AND COUNTY BOROUGH | DEATH RATES† per 1,000 OF POPULATION FROM | | | | | Deaths of infants under one year per 1,000 Births‡ | DEATHS FROM DISEASES OF PREGNANCY CHILDBIRTH AND THE PUERPERAL STATE | | | |

* Typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles typhus, and diarrhoea and enteritis (under 2 years of age).

† The rates for Éire and the City of Dublin are calculated on the estimated population at the middle of 1948 and those for the other areas on the population according to the Census of Population, 1946.

‡ The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table V., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

Table IV.—MARRIAGES, BIRTHS and DEATHS Registered by Provinces and Counties, with the Deaths from some of the principal causes ; inquest cases ; deaths in public institutions and uncertified deaths during the September Quarter, 1948.

(a) According to the Census of 1946. The populations for the City of Dublin and the Borough of Dun Laoghaire are estimated to the middle of 1948.
(b) The number of births in this Table is partially corrected according to the residence of the mother. The number of births in Table IV is the total registered in the respective areas.
(c) Typhoid fever. (d) Dysentery.

Table VI.—Deaths registered for the City of Dublin and the County Borough of Cork by Registrars' Districts, during the September Quarter, 1948.

[illegible]

Table VII.— Summary of Cases of Infectious Diseases notified to the Department of Health during the September Quarter, 1948.

This Summary has been prepared from the Department's Weekly Returns, but adjustments have been made in respect of any corrections of these returns received after their issue.

The letters in the last column denote the following diseases : A. Acute Anterior Poliomyelitis. B. Cerebro-spinal Fever. C. Encephalitis Lethargica. D. Diarrhoea and Enteritis. E. Paratyphoid A. F. Paratyphoid B. G. Trachoma. H. Erysipelas. J. Ophthalmia Neonatorum. K. Pemphigus Neonatorum. L. Undulant Fever. M. Continued Fever. N. Dysentery (Bacillary). O. Dysentery (Amoebic). P. Malaria. Q. Membranous Croup. U. Scabies. V. Infective Hepatitis, W. Streptococcal. Sore Throat, X. Tinea Capitis, Y. Rubella.

YEARLY SUMMARY, 1948.

| | |
|--|----|
| Text | 65 |
| Table 1. Marriages, births, deaths and vaccinations by counties | 66 |
| „ 2. Death rates by counties | 68 |
| „ 3. Births and deaths for principal towns | 69 |
| „ 4. Deaths for Dublin and Cork | 70 |
| „ 5. Notifications of infectious diseases | 71 |
| „ 6. Cases treated in Dublin hospitals | 76 |

NOTE.—The figures in this report are provisional. The number of births is exclusive of the number of late registrations—births registered on the authority of the Registrar General. Deaths have been assigned so far as possible to the area of residence, and those of non-residents of Eire have been excluded.

DECEMBER QUARTER, 1948.

MARRIAGES.

The marriages registered during the quarter numbered 3,637, equivalent to an annual rate of 4.9 per 1,000 of the estimated population; this rate is 0.1 above that for the corresponding quarter of 1947.

Of the total marriages, 3,445 (or 4.9 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (192) is equivalent to 3.9 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 14,991, of which 7,750 were of males and 7,241 of females.

The number represents a rate of 20.0 per 1,000 of the estimated population, which is 0.3 below that for the fourth quarter of 1947.

The total includes 503 illegitimate births, equivalent to 3.4 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 8,544; of this number 4,475 were of males, and 4,069 of females.

The equivalent annual rate was 11.4 per 1,000 of the estimated population, being 0.2 below the rate for the fourth quarter of the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles, typhus and diarrhoea and enteritis (under 2 years)—represented an annual rate of 0.2 per 1,000, which is 0.2 below that for the fourth quarter of 1947.

When compared with the corresponding quarter of 1947, the deaths from these diseases show decreases in the case of scarlet fever of 4, whooping cough of 10, diphtheria of 3, measles of 14 and diarrhoea and enteritis (under 2 years) of 103.

The deaths from diarrhoea and enteritis (under 2 years) numbered 82, including 14 for the City of Dublin.

Influenza.—The number of deaths from influenza was 28, which is one less than that for the fourth quarter of 1947.

Tuberculosis.—Deaths from this disease numbered 630, including 492 from pulmonary tuberculosis and 138 from other forms of tuberculosis. The figures for the fourth quarter of 1947 were 750, 586 and 164 respectively. The rate for all forms of this disease for the fourth quarter of 1948 was 0.8 per 1,000, that for pulmonary tuberculosis being 0.6 and all other forms 0.2, the corresponding rates for the fourth quarter of the preceding year being 1.0, 0.8 and 0.2.

Cancer.—Deaths from cancer numbered 960, being equivalent to a rate of 1.3 per 1,000 of the population; in the corresponding quarter of 1947 the number was 972 and the rate also 1.3.

Puerperal Causes.—Deaths from these causes were represented by a rate of 1.0 per 1,000 births registered, as compared with 2.7 for the fourth quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 48, compared with a rate of 65 for the December quarter of 1947.

Population.—It is estimated that at the middle of the year 1948 the population was 2,997,400 (1,516,200 males and 1,481,200 females). This estimate, based on the population according to the Census of Population, 1946, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is provisional.

Table I.—MARRIAGES, BIRTHS and DEATHS registered in the years 1943 to 1948, by Quarters.

* Typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles typhus, and diarrhoea and enteritis (under 2 years of age).

† The rates for Éire and the City of Dublin are calculated on the estimated population at the middle of 1948 and those for the other areas on the population according to the Census of Population, 1946.

‡ The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table V., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

Table IV.—MARRIAGES, BIRTHS and DEATHS Registered by Provinces and Counties, with the Deaths from some of the Principal Causes; Inquest Cases; Deaths in Public Institutions and Uncertified Deaths during the December Quarter, 1948.

(a) According to the Census of 1946. The populations for the City of Dublin and the Borough of Dun Laoghaire are estimated to the middle of 1948.

(b) The number of births in this Table is partially corrected according to the residence of the mother. The number of births in Table IV is the total registered in the respective areas.

(c) Typhoid fever.

Table VI.—Deaths registered for the City of Dublin and the County Borough of Cork by Registrars' Districts during the December Quarter, 1948.

YEAR 1948.

MARRIAGES.

The marriages registered during the year numbered 16,331, equivalent to an annual rate of 5.4 per 1,000 of the estimated population; this rate is 0.1 below that for the year 1947.

Of the total marriages, 15,352 (or 5.5 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (979) is equivalent to 4.9 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the year amounted to 65,584, of which 33,814 were of males and 31,770 of females.

This number represents a rate of 21.9 per 1,000 of the estimated population, being 1.3 below the rate for the year 1947.

The total includes 2,098 illegitimate births, equivalent to 3.2 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the year was 36,502; of this number 19,238 were of males, and 17,264 of females.

The equivalent annual rate was 12.2 per 1,000 of the estimated population, being 2.6 below the rate for the preceding year. The rate for 1948 is the lowest recorded.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoea and enteritis (under 2 years of age)—represented an annual rate of 0.2 per 1,000, which was 0.2 below the rate for the year 1947.

When compared with the corresponding figures for the preceding year deaths from these diseases show decreases in the case of typhoid fever of one, scarlet fever of 4, whooping cough of 102, diphtheria of 25, measles of 45, and diarrhoea and enteritis (under 2 years) of 404.

The deaths from diarrhoea and enteritis (under 2 years of age) numbered 340, including 80 for the City of Dublin.

Influenza.—The number of deaths from influenza was 179, which was 472 less than that for the year 1947.

Tuberculosis.—Deaths from all forms of tuberculosis numbered 3,017, comprising 2,398 from pulmonary tuberculosis, and 619 from other forms of tuberculosis. The figures for the year 1947 were all forms 3,700, pulmonary 2,831 and other forms 869 respectively. The rate for deaths from all forms of this disease for 1948 was 1.0 per 1,000, the rate for pulmonary tuberculosis being 0.8, and all other forms 0.2; the respective rates for 1947 were 1.2, 0.9 and 0.3. The rate for 1948 is the lowest recorded.

Cancer.—Deaths from cancer numbered 3,885, being equivalent to a rate of 1.3 per 1,000 of the population; in the year 1947 the number was 3,962, and the rate also 1.3.

Puerperal Causes.—Deaths from these causes are represented by a rate of 1.4 per 1,000 births registered, comprising 0.2 for puerperal infection, and 1.2 for other puerperal causes, as compared with 1.8, 0.4 and 1.4 for 1947.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 49, that for the year 1947 being 68. The rate for 1948 is the lowest recorded.

Table 1.—MARRIAGES, BIRTHS and DEATHS Registered by Provinces and Counties, with Deaths from some of the Principal Causes ; Inquest Cases ; Deaths in Public Institutions and Uncertified Deaths during the year 1948.

* Typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles, typhus, and diarrhoea and enteritis (under 2 years of age).

† The rates for Eire and the City of Dublin are calculated on the estimated population at the middle of 1948 and those for the other areas on the population according to the Census of Population, 1946.

‡ The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table IV., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

Table 3.— BIRTHS and DEATHS registered for the Principal Towns during the year 1948.

(a) According to the Census of Population, 1946. The populations for the City of Dublin and the Borough of Dun Laoghaire are estimated to the middle of 1948.
(b) The births in this Table are partially corrected according to the residence of the mother. The births shown in Table 1 are the total numbers registered in the respective areas.
(c) Typhoid fever.
(d) Including 2 deaths from typhoid fever and 4 from dysentery.

Table 4.—Deaths registered for the City of Dublin and the County Borough of Cork by Registrars' Districts during the year 1948.
